Overview

Primary: Long/Short Global Large Cap Equities

Secondary (overlay): Global Macro

Artificial Intelligence (AI) is used to avoid behavioural bias, with additional benefits of productivity, consistency and processing exponential data. On a quarterly basis it replicates the best human Econometric, Fundamental, Qualitative, Quantitative, Technical and Traditional analysis of US and Chinese economies, US interest rates and individual securities, also it reads documentation and provides sentiment analysis on news flow. Immediate liquidity is provided by only trading in securities with a market capitalisation in excess of \$1bn with a listing either in the US, as an ADR, in London or Canada. When performance is not adequate the AI is re-coded. Net positioning can range between 100% long and 20% short

Performance Statistics and benchmark comparisons

Manager Biography

Steven J Cohen CFA is the principal and CIO of a California based multi-family office. He gained his BSc Econ from UCL, spent several years in Chartered Accountancy and, was retail clothing entrepreneur in central London. Later he became in-house counsel to the UK's wealthiest family, then managed a multi billion dollar equity portfolio for a big 4 UK bank. After very successful investing returns in 2007 & 2008 he established his family office, and today develops artificial intelligence generated investment strategies for a global client base.
